EDUCATION

Western University June 2028
Honors Specialization in Computer Science *London, ON*

EXPERIENCE

Software Engineer In Test Intern *June 2026 – Present*
Veeva Systems *Toronto, ON*

- Developed and maintained **100+** automated UI and API tests using **Java**, **Selenium**, **JUnit**, and **Cucumber** to validate functionality across enterprise cloud applications.
- Built and integrated automated regression tests into **Maven-based Jenkins** CI/CD pipelines, enabling continuous validation of application builds and earlier detection of software defects.
- Collaborated with software engineers, product managers, and QA teams in **Agile** environments to investigate defects, improve test coverage, and support software releases.
- Debugged automated test failures, performed **root cause analysis**, and identified functional and integration issues to improve software reliability.
- Leveraged **Claude Code** and **Gemini** to accelerate test automation development, troubleshoot failures, and improve development efficiency.

PROJECTS

Software Developer — Planning & Control (WEAP) *September 2025 – January 2026*

- Developed trajectory generation and motion-planning modules in **Python**/**C++** for an autonomous vehicle platform built on **ROS2**.
- Implemented **PD**/**PID**-based steering and speed controllers, improving path-tracking stability and reducing oscillation during maneuver execution.
- Integrated planning outputs with perception and localization pipelines, ensuring reliable vehicle state estimation and safe navigation.

Job Application Tracker *June 2025 – June 2025*

- Designed and developed a full-stack application with **Python**, **FastAPI**, and **React** to manage and validate job application data.
- Implemented database schemas and CRUD operations using **SQLAlchemy**, ensuring robust data integrity.
- Developed an interactive **React** interface enabling users to update applications throughout the hiring process.

Virtual Pet Game *April 2025 – April 2025*

- Developed a virtual pet simulation game in **Java** that enables users to manage pet health, hunger, and happiness through an interactive gameplay system.
- Implemented persistent save/load functionality using local file storage to preserve pet statistics, inventory, and player progress across sessions.
- Collaborated with a development team using **Git** to design, implement, and test application features, leveraging **JUnit** to validate core game functionality.

SKILLS

Programming Languages: Python, Java, C, SQL, JavaScript, C++
Frameworks & Libraries: React, Node.js, Flask, FastAPI, JUnit, Selenium, Cucumber
Tools & Platforms: GitHub, VS Code, IntelliJ, Linux, ROS2, PyCharm, CI/CD, Jenkins, Maven
